## ALIGNMENTS

```
This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMGKEDLIWELL, TTEDSIAKINNGRADMSLDGGF, SKLSMGSGIANLSEN a YEKYLGEBYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention. The antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for
                                                                                                                                                                                                                                             New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody; carbohydrate-deficient transferrin; CDT;

The antibodies are useful for diagnosis of alcoholism, CDT, which lacks glycosylation at kan413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; Antiinflammatory;

                                                                                                                                                                           The present invention relates to an isolated nucleic acid molecule encoding a polypeptide which is believed to be cytostatic, antiinflammatory, immunosuppressive, antibacterial and virucidal. The composition and methods are useful for diagnosing, preventing and treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases. The present sequence represents a human secreted protein. The present sequence is available on WIPOWEB and is not in the specification.
                                                                                                                                  Revised record corrected
                                                                                                                                                                                                                                                                                                                                                      New nucleic acid molecule for diagnosing, preventing or treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases.

The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachesian syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of a protein which was used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New fusion protein comprising a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region, useful furgering a composition for treating e.g., septic shock, neoplasm or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-AUG-2001; 2001US-0315745P.

Considers or diseases of endocrine system, nervous system, immune system, crespiratory system, cardiovascular system, diseases and/or disorders crelating to cell proliferation, and/or diseases or disorders relating to blood. The modified fusion proteins are useful in diagnosis, prognosis, comprevention and/or treatment of autoimmune disorders; diseases and disorders of haematopoletic cells (e.g., leukopenia, neutropenia, anaemia canaphylaxis, IgE-mediated allergic reactions such as allergic asthma, comphylaxis, igE-mediated allergic reactions such as allergic asthma, rhinitis and ezema; inflammatory conditions e.g., inflammation associated with comphylaxis, Crohn's disease, multiple sclerosis, respiratory disorders (asthma and allergy), gastrointestinal disorders (inflammatory bowel disorders such as allergic reactions such as asthma, rhinitis and ezema; intlammatory conditions e.g., inflammation associated with comphritis, Crohn's disease, multiple sclerosis, respiratory disorders (disease), cancers (e.g., gastric, ovarian, lung, bladder), CNS disorders (multiple sclerosis, stroke, traumatic brain injury, neurodegenerative contifungal immune responses, antiparasitic immune responses, etc. The cundetermined significance (MGUS), Waldenstrom's disease, plasmacytomas, adult respiratory distress syndrome, for stimulating wound repair, for preventing or treating infections of joints, bones, skin, etc. The fusion protein is also useful for treating or preventing thrombosis, myocardial infarction, cancers, thrombosytopenia, sickle cell anaemia, catherosis, etc. In an example from the invention, a system of catheroscolerosis, etc. In an example from the invention, a system of for incorporated into the pIII protein and the insertion of random peptides incorporated into the pIII protein and the insertion of random peptides
            The present invention relates to a library (I) of modified fusion proteins of transferrin (Tf) and therapeutic proteins with increased serum half-life or serum stability. Preferred fusion proteins include those modified so that the Tf moiety exhibits no or reduced glycosylation, iron binding and/or Tf receptor binding. The transferrin fusion proteins are useful for treating, preventing or ameliorating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel library containing several fusion proteins each of which comprises first transferrin polypeptide fused to at least one second peptide, useful for screening for transferrin fusion protein having the particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2004-239175/22.

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, immune disorders such as immune complex nephritis, multiple sclerosis, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such

                      The invention relates to novel human metalloproteins (MEPR) and encoding polynucleotides. The human MEPR polypeptides, polynucleotides and modulators are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MEPR, particularly cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal hemoglobinuria, polycythemia vera, psoriasis, primary thromobocytopenia or cancer), developmental disorders (e.g. renal tubular acidosis, anemia or mental retardation), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), autoimmune/inflammatory disorders (e.g. ALDS, allergies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antianemic; antiparkinsonian; nootropic; anticonvulsant; cytostatic; antiarteriosclerotic; antiasthmatic; immunosuppressive; antithyroid; hepatotropic; dermatological; antidiabetic; nephrotropic; antigout; thyromimetic; neuroprotective; osteopathic; antiarthritic; uropathic; antiparasitic; antihelmintic; antipsoriatic; ophthalmological; virucide; antirheumatic; haemostatic; antibacterial; protozoacide; fungicide;

                The invention relates to novel human metal binding proteins (MBP) and CC encoding polynucleotides. The MBPs can be expressed by standard cc recombinant methodology. The polypoptides and polynucleotides are useful cc in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of MBP, such as cell cc poliferative (e.g. cancer, atherosclerosis), neurological (e.g. AIDS, cc epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, cc epilepsy, and developmental (e.g. Hypothyroidism, Cushing's syndrome) cc disorders, or infections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid compounds for effectiveness as agonist or antagonist of the polypoptides, cr in altering the expression of the target polynucleotide and compounds contractions on the target polynucleotide and compounds contractions or antagonist of the polypoptide. An contraction of the carriers where a fixed at distinct cohosical locations a solid enhancer where a fixed and compounds contracted locations on a solid enhancer where a fixed at distinct cohosical locations a solid enhancer where a fixed at distinct cohosical locations a solid enhancer where a fixed at distinct cohosical locations a solid enhancer where a fixed at distinct cohosical locations as a solid enhancer where a fixed at distinct cohosical locations as a solid enhancer where a fixed and compounds compounds and a solid enhancer where a fixed at distinct cohosical locations as a solid enhancer where a fixed at distinct cohosical locations and solid enhancers where a fixed at distinct cohosical locations and solid enhancers where a fixed at distinct cohosical locations and solid enhancers where a fixed at distinct cohosical enhancers are a solid enhancers and compounds and a solid enhancers and compounds and a solid enhancers and compounds are also enhanced and compounds and a solid enhancers and compounds are also enhanced and compounds are als
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorders, developmental disorders, endocrine disorder, neurological disorders, developmental disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline
                                                                                                                                                                                                                                                                                                                                                                                    Schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, G; Patury S, Shi X, Suarez CJ;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therappeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis,

Claim 4; Fig 38; 519pp; English

Novel alternative aplicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.

                                                                                                                                                    The sequence represents an angiotensin converting enzyme splice variants (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various the property of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 10; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidotic pulmonary granulomatous disease; endothelial abnormality;
                                  disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as hypertrophy, such as diabetic nephropathy, muscular diseases such as hypertrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial abnormality such as deep vein thrombosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2001-336004/35.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   minus the signal peptide. The invention relates to modified Tf fusion proteins comprising at least one therapeutic protein, polypeptide or peptide, in which the Tf portion is engineered to extend the serum half-life or bioavailability of the molecule. The modified Tf fusion protein preferably comprises a human Tf moiety that has been modified to reduce or prevent glycosylation, iron binding and/or transferrin receptor binding having at least one amino acid substitution, deletion or addition in the hinge region, or at residues Asp-63, Gly-65, Tyr-95, Tyr-188, Lys-266, His-207, His-249, Asp-392, Tyr-426, Tyr-517, His-585, Thr-120, Arg-124, Ala-126, Gly-127, Thr-452, Arg-456, Ala-458 and Gly-459, or a mutation which prevents glycosylation at Asn-413 or Asn-611 (all claimed). Nucleic acids encoding such fusion proteins, vectors, host serum or milk are also claimed. The modified fusion protein is useful for region or milk are also claimed. The modified fusion protein is useful for the protein of the service of the s
                                                                                                                                                                                                                                                                                                                                  treating a disease or disease symptom, or for delivering a therapeutic agent complexed to the ferric iron of transferrin to the inside of a cell or across the blood-brain barrier. The modified fusion protein, or a nucleic acid encoding it, can be used in the diagnosis, prognosis, prevention and/or treatment of diseases and/or disorders of the
                                                                                                                                                                                                                                     endocrine, nervous, immune, respiratory, cardiovascular, reproductive and digestive systems, diseases and/or disorders relating to the blood or to cell proliferation, inflammatory conditions, and to treat viral, fungal, bacterial or parasitic infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New fusion protein, useful in the diagnosis and treatment of diseases or disorders relating to the respiratory, cardiovascular and digestive systems, comprises a transferrin protein fused to a therapeutic protein.
                                                                                                                                                                                          Sequence 679
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 280-281; 298pp; English.

                                                                 Matches
                                                                                                                                                                               This invention relates to a novel fusion protein which comprises a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region. The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of the mature human transferrin protein which is related
                                                                                                                                                                                                                                                                                                                                                                                                                                           New fusion protein comprising a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region, useful for preparing a composition for treating e.g., septic shock, neoplasm or autoimmune disease.
                                                                                                                                   Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention comprises a fusion protein that contains a modified transferrin (Tf) protein fused to a therapeutic protein/peptide (e.g. beta-interferon - IFN, glucagone-like peptide - GLP-1, erythropoietin mimetic peptide - EMP1, T-20 and soluble toxin receptor). The fusion protein of the invention is useful for epitope tagging. The present amino acid sequence represents the mature human Tf protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  30-AUG-2001; 2001US-0315745P.

                                                                                                                                                    CC serum half-life or serum stability. Preferred fusion proteins include
CC those modified so that the Tf moiety exhibits no or reduced
CC glycosylation, iron binding and/or Tf receptor binding. The transferrin
CC fusion proteins are useful for treating, preventing or ameliorating
CC disorders or diseases of endocrine system, nervous system, immune system,
CC relating to cell proliferation, and/or diseases and/or disorders
CC relating to cell proliferation, and/or diseases and/or disorders relating to
blood. The modified fusion proteins are useful in disgnosis, prognosis,
CC prevention and/or treatment of autoimmune disorders; diseases and
CC disorders of haematopoietic cells (e.g., leukopenia, neutropenia, anaemia
CC and thrombocytopenia); allergic reactions such as altergic asthma,
CC infection (e.g., septic shock, sepsis), ischaemia-reperfusion injury,
CC nephritis, Crohn's disease, multiple sclerosis, respiratory disorders
CC (asthma and allergy), gastric, ovarian, lung, bladder), CNS disorders
CC (disease), cancers (e.g., gastric, ovarian, lung, bladder), CNS disorders
CC (disease), cancers (e.g., gastric, ovarian, lung, bladder), CNS disorders
CC (disorders such as Parkinson's disease, Alzheimer's disease, etc. The
CC fusion protein is also useful as an adjuvant to enhance antibacterial or
CC suchma protein is also useful as an adjuvant to enhance antibacterial or
CC undetermined significance (MGUS), Waldenstrom's disease, plasmacytomas,
CC adult respiratory distress syndrome, for stimulating wound repair, for
CC preventing or treating infections, of joints, bones, skin, etc. The
CC fusion selve and selve and selve and solve and selve and sel

## Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                     Score
